

Fur Trappers were just that
Some took Indian women as their wives
on their trapping exploits.

The mountain men were former trappers, who,
when the fur trade diminished; settled down
with their wives and children in the mountains
in the late 1830s & the 1840s.

Fur trapping in Utah started - John Jacob Astor came
(a German's Astoria, in 1811 coming from the NW & lasted to early 1840s)
stage Coaches were used for more rapid
transportation from — to 10 May 1869, when the
Brand new Transcontinental Railroad signalled the
major demise of

Pioneer

Great Plains

A vast, semiarid grassland in west central North America, the Great Plains extend from southwest Texas 4,830 km (3,000 mi) north to the MACKENZIE RIVER delta in Canada; their east to west extent is from the border of the Laurentian Highlands and the Central Plains to the ROCKY MOUNTAINS, varying in width from 485 to 1,125 km (300 to 700 mi). Rising well above sea level, the Great Plains begin at an elevation of about 460 m (1,500 ft) in the east and rise gradually to over 1,800 m (about 6,000 ft) in the foothills of the Rockies. The terrain is generally level, although broken in places by buttes, badlands, and small, isolated mountain groups such as the BLACK HILLS of South Dakota. Precipitation, which averages less than 510 mm (20 in) a year, decreases from east to west and from south to north. Most rain occurs in the spring; summers are dry, often with severe wind erosion and occasional, violent thunderstorms. The climate is continental steppe, with strong winds and great temperature variations in winter and summer. The population is relatively sparse; DENVER (1990 pop., 467,610) is the largest city.

Rivers, including the MISSOURI and its tributaries, the ARKANSAS and the RIO GRANDE, rise in the Rocky Mountains and flow east or southeast. Full to flooding in the spring from rain and melted snow, many streams dry to a trickle in the summer. Hydroelectric projects provide power, flood control, and irrigation. The Great Plains were a vast inland sea in the remote past; marine sediments underlie much of the area. Now grass-covered, with scattered trees found only along the streams, it is excellent grazing country, supporting large herds of cattle and sheep on sprawling ranches, some larger than 40,500 ha (100,000 acres). Wheat is grown in the east where farms are large and highly mechanized. Mineral resources include oil, natural gas, coal, iron, helium, and gold.

First inhabited by nomadic Indians, the Great Plains attracted buffalo hunters and ranchers. Permanent settlement came in the last half of the 19th century, spurred by massive immigration and the building of railroads.
